Claim 12; Page 80; 149pp; English

New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

Kubo H;

Alitalo K, Koivunen E, WPI; 2002-691521/74.

The present invention describes an isolated peptide (I) that binds to and

```
have cytostatic, hepatotropic, antiinflammatory, hypotenaive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung, pancreas, colon, stomach, breast, endometrium, prostate, testicle, pancreas, colon, stomach, breast, endometrium, prostate, testicle, overy, skin, head and neck, oesophagus, bone, marrow or blood, and diseases of neconscullarisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangloms and diabetes. The present sequence represents a specifically claimed VEGFR-3 binding peptide from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Vascular endothelial growth factor receptor 3 inhibitor; VEGFR-3; angiogenesis; lymphangiogenesis; vascular endothelial growth factor; cytostatic; heparotropic; antiinflammatory; hypotensive; antiidiabetic; vulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypertension; post-tranma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes an isolated peptide (1) that binds to and inhibits vascular endothelial growth factor receptor 3 (VBCRR-3). (1) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and texting disorders mediated by the activity of the cell surface receptor VBGFR-3 such as cancer, e.g. brain, lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes an isolated peptide (I) that binds to and inhibits vascular endothelial growth factor receptor 3 (VEGFR-3). (I) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung, liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary,
                    ovary,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.
liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary skin, head and neck, oesophagus, bone, marrow or blood, and diseases of neovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangionas and diabetes. The present sequence represents a specifically claimed VEGFR-3 binding peptide from the

(I) have cytostatic, hepatorropic, antininflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung, liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Vascular endothelial growth factor receptor 3 inhibitor; VEGFR-3; anglogenesis; lymphangiogenesis; vascular endothelial growth factor; cytostatic; hepatotropic; antiinflammatory; hypotensive; antidiabetic; vulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypertension; post-trauma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes an isolated peptide (I) that binds to and inhibits vascular endothelial growth factor receptor 3 (VEGFR-3). (I) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung, liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a somatostatin analogue of the invention. The invention relates to a backbone cyclised somatostatin analogue that has one building unit containing a nitrogen atom of the peptide backbone connected to a bridging group comprising an amide, thioether, thioester or disulphide. At least one building unit is connected via a bridging group to form a cyclic structure with a moiety selected from a second building unit, side chain of or N-terminal amino acid residue. A composition containing the analogue may be used for preventing disorders such as cancers, autoimmune diseases, endocrine disorders, diabeticases completed complications, gastrointestinal disorders, inflammatory

                   pain. It may also be used for diagnosing cancer. The backbone cyclic analogue is used for imaging the existence of metastases. Somatostatin analogues can be used for the treatment patients with hormone-secreting and hormone-dependent tumours. They reduce diarrhoea through the inhibition of vasoactive intestinal peptide (VIP) secretion and by direct effect on intestinal secretion. Somatostatin analogues selective to type 2 and 5 receptors may be used for treatment of non-insulin dependent diabetes mellitus. They are useful for the prevention of atherosclerosis and restenosis. The analogues are metabolically stable, selective in

The present invention describes an isolated peptide (I) that binds to and inhibits vascular endothelial growth factor receptor 3 (VEGR-3). (I) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and wulnerary activities, and can be used in gene therapy. diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGR-3 such as cancer, e.g. brain, lung, liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, oesophagus, bone, marrow or blood, and diseases of necovascularisation, e.g. liver diseases, hypertension, post-trauma, ohronic hepatitis, haemangiomas and diabetes. The present sequence represents a specifically claimed VEGR-3 binding peptide from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    angiogenesis, lymphangiogenesis, vascular endothelial growth factor, cytostatic, hepatotropic, antiinflammatory; hypotensive, antidiabetic; uninerary; cell surface receptor; cancer; neovascularisation; liver disease, hypertension; post-trauma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vascular endothelial growth factor receptor 3 inhibitor; VEGFR-3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated peptide that inhibits VEGF-C and VEGF-D, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               55.4%; Score 31; DB 5; Length 9; 57.1%; Pred.                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                 셤
                The present invention describes backbone cyclised somatostatin analogues

(I) that incorporates at least one building unit containing one nitrogen

atom of the peptide backbone connected to a bridging group (comprising an

anide, thioether, thioester or disullide) where at least one building an

anide, thioether, thioester or disullide) where at least one building

unit is connected via the bridging group to form a cyclic structure with

a moiety selected from the group consisting of a second building unit,

the side chain of an amino acid residue of the sequence or the N-terminal

cytostatic, antidiabetic, antiinflammatcry and analgesic activities, and

can be used as somatostatin receptor ligand. (I) are useful in the

treatment of atherosclerosis, autoimmune diseases, cancers, diabetic-

associated complications, endocrine disorders, inflammation.

Gastrointestinal disorders, pancreatitis, post-surgical pain, and

restenosis. (I) can also be used in the diagnosis of cancer, by imaging

the existence of metastases, it being labeled with a detectable probe.

The present sequence represents a backbone cyclised somatostatin analogue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAW97452-571 represent antigenic sites derived from the haemagglutinin-
neuraminidase (HN) protein of the paramycovitides. The specification
describes 3-D models identifying a proteinaceous substance comprising at
least one virus epitope derived from the attachment protein, which
corresponds to an antigenic site present on one of the loops of HN. The
antigenic sites can be used to produce vaccines, to detect the viruses,
and to select the immunodominant epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated proteinaceous substance - comprising at least one virus epitope derived from an attachment protein of a paramyxovirus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antigenic site; haemagglutinin-neuraminidase; HN; paramyxoviridae; virus epitope; attachment protein; vaccine; immunodominant epitope

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel composition comprising one or more peptides or nucleic acids encoding an HLA binding peptide. The composition further comprises an HTL epitope. It also comprises a spacer molecule, a carrier, an MHC targeting sequence or a lipid. The peptides are incorporated as part of a liposome. The peptide is from an antigen are incorporated as part of a liposome. The peptide is from an antigen selected from prostate specific antigen (PSA), prostate specific membrane antigen (PSM), hepatitis B virus (HBV) antigen, hepatitis C virus (HCV) antigen, malignant melanoma antigen (MAGE), Epstein Barr virus, HUW and immunodeficiency type-1 (HIV-I), human immunodeficiency type-2 (HIV-2), amtine p53 (mp53), CEA, HERZ/neu, and tyrosine kinase related protein (TKP). The composition is useful for preventing or treating viral infections or cancer, such as prostate cancer, hepatitis B, hepatitis C, AIDS, renal carcinoma, cervical carcinoma, lymphoma, CMV or chondyloma acuminatum. The composition is also be used for diagnosing such diseases. This sequence represents a peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New composition of peptides and nucleic acids capable of binding Major Histocompatibility Complex molecules, useful for diagnosing, preventing or treating viral infections or cancer, such as prostate cancer, hepatitis B or AIDS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        31-OCT-1991
```

```
The peptide is isolated from plants of the Euphorbiaceae family (see FEBS Letters 256, 1-2, 1989). It selectively inhibits the classical activation pathway of the complement system by binding to IGG. It can be used to treat autoimmune disorders e.g. rheu- matic and other inflammatory disorders, and immuno-complex-related diseases, e.g. extrinsic allergic alveolitis. It may also be used to isolate IGG from blood plasma or serum to reduce the level of IgG, or as immunoassay reagent to determine IgG levels in body fluids. See also AAR14710. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; extracellular serine protease; tumour antigen derived gene-16;
TADG-16; ovarian carcinoma; breast cancer; lung cancer; colon cancer;
prostate cancer; HLA type.
                                                                                                                                                  New cyclic peptide(s) e.g. labaditin, having IgG binding properties used for IgG binding in mammals including humans and for treating inflammatory diseases including rheumatic and auto:immune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New tumor antigen-derived gene-16 protein, useful for diagnosis and treatment of ovarian, breast, lung, colon and prostate cancer.

AAU02225-AAU02384 represent TADG-16 peptides which are tested for their binding affinity to the 8 haplotypes HLA A0201, HLA A0205, HLA A1, HLA A24, HLA B27, HLA B2702, and HLA B4031, Tumour antigen derived gene-16 protein, TADG-16 (AAU02223), is a novel human extracellular serine protease. TADG-16 is expressed in normal ovaries and testes and in certain ovarian carcinomas. TADG-16 contains the conserved catalytic triad, His-Asp-Ser, and a signal secretion sequence characteristic of the serine protease family. An antisense oligonucleotide having a complementary sequence to the TADG-16 nucleic acid is useful for treating various cancers, including ovarian, breast, lung, colon and prostate. The TADG-16 nucleic acid, TADG-16 protein and antibodies specific to TADG-16 are useful for the diagnosis of cancer. TADG-16 protein or its fragments are useful for vaccinating an individual against TADG-16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAU02225-AAU02384 represent TADG-16 peptides which are tested for their binding affinity to the 8 haplotypes HLA A0201, HLA A0205, HLA A1, HLA A24, HLA B7, HLA B8, HLA B2702, and HLA B4031. Thmour antigen derived gene-16 protein, TADG-16 (AAU02223), is a novel human extracellular serine protease. TADG-16 is expressed in normal ovaries and testes and in certain ovarian carcinomas. Also described in the present invention are: (1) a nucleic acid (11) encoding (1); (2) a vector (III) comprising one or more (III) operably linked to an expression control system; (3) a cell (IV) comprising (II) or (III); (4) preparing (I); (5) identifying (M1) peptides having immunologic properties of Rhesus D protein epitopes comprising subjecting an antibody/antibody fragment recognising an epitope of Rhesus D protein to several panning rounds with a phage captope of Rhesus D protein epitopes obtained by (M1). (1) is used to manufacture an agent for their amino acid sequences of Rhesus D protein epitopes obtained by (M1). (1) is used to manufacture an agent for the diagnosis, therapy or prophylaxis of cliseases associated with Rhesus D antigen, e.g. haemolytic disease of the manufacture of an affinity reagent for anti-Rhesus D antibodies purified or removed from body fluids or immunoglobulin preparations. Using (1) as an immunogen to raise antibodies avoids using immunisation with foreign erythrocytes thereby avoiding the risk of transmission of viral diseases like AIDS and hepatitis B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ASQUENCE 1454

Sequence 1454, Application US/09572404B

Sequence 1454, Application US/09572404B

Fublication No. US2030078374A1

GENERAL INFORMATION:

APPLICANT: Proteom Ltd

TITLE OF INVENTION: Complementary peptide ligands from the human genome

FILE REPERRINCE: Human patent

CURRENT APPLICATION NUMBER: US/09/572,404B

CURRENT FILING DATE: 2000-05-17

NUMBER OF SEQ ID NOS: 4203

SOFTWARE: ProtPatent version 1.0

ALIGNMENTS

RESULT 1 S71868
glutathione transferase (EC 2.5.1.18) class mu 4 - pig (fragment) N:Alternate names: glutathione S-transferase class mu 4
C;Species: Sus scrofa domestica (domestic pig)
C;Date: 19-Mar-1998 #sequence_revision 13-Sep-1998 #text_change 09-Jul-2004
C;Accession: S71868
R;Rouimi, P.; Anglade, P.; Debrauwer, L.; Tulliez, J.
Biochem. J. 317, 879-884, 1996
A, Title: Characterization of pig liver glutathione S-transferases using HPLC-electrospray
A; Reference number: S71864; MUID: 96332484; PMID: 8760377
A; Accession: S71868
A;Molecule type: protein
A;Residues: 1-10 <rou></rou>
A;Cross-references: UNIPROT:Q7M3E8
C; Comment: At least five species-independent classes of cytosolic glutathion transferases
s mitochondrial form are known.
C;Complex: dimer
C; Function:
A, Description: catalyzes the nucleophilic conjugation of intracellular glutathione to a v
A; Pathway: detoxification; xenobiotics metabolism
A; Note: increased hydrophilicity of GSH-conjugates facilitates their further metabolism a
es of damage
C;Superfamily: glutathione transferase

C; Keywords: dimer; transferase

PT0642
T-cell receptor beta chain V-D-J region (111-1H) - mouse (fragment)
C;Species: Wus musculus (house mouse)
C;Date: 17-Jul-1992 #sequence_revision 17-Jul-1992 #text_change 30-May-1997
C;Accession: PT0642
B. Feeney, A.J.
J. Exp. Med. 174, 115-124, 1991
A;Title: Junctional sequences of fetal T cell receptor beta chains have few N regions.
A;Reference number: PT0509; MUID:91277601; PMID:1711558
A;Accession: PT0642
A;Status: translation not shown
A;Molecule type: mRNA
A;Molecule type: mRNA
A;Residues: 1-7 <FEE>
A;Residues: 1-7 <FEE>
A;Experimental source: newborn thymus, strain BALB/c
C;Keywords: T-cell receptor

The present invention describes an isolated peptide (I) that binds to and

Claim 12; Page 80; 149pp; English.

New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

         have cytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung, liver, spleen, kidney, lymph node, small intestine, blood cells, bancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, osesphagus, bone, marrow or blood, and diseases of neovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangiomas and diabetes. The present sequence represents a specifically claimed VEGFR-3 binding peptide from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes an isolated peptide (I) that binds to and inhibits vascular endothelial growth factor receptor 3 (VEGR-3). (I) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Vascular endothelial growth factor receptor 3 inhibitor; VEGFR-3; angiogenesis; lymphangiogenesis; vascular endothelial growth factor; cytostatic; hepatotropic; antiinflammatory; hypotensive; antidiabetic; vulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypertension; post-trauma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9 2
      pancress, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, oesophagus, bone, marrow or blood, and diseases of neovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangiomas and diabetes. The present sequence represents a specifically claimed VEGFR-3 binding peptide from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to novel isolated polypeptides comprising a sequence that binds an immunoglobulin Fc region. The polypeptides are useful as binding molecules for detecting, isolating or purifying immunoglobulin Fc-region polypeptides present in a solution, e.g. whole blood, plasma or transgenic milk. The Fc-region binding polypeptides are also useful for regulating or preventing an antibody response, or for increasing the half-life and over all stability of a therapeutic or diagnostic compound that is administered to or enters the circulatory system of an individual. This sequence represents an Fc region binding
                                                                                                                                                                                                                                                                                                                                                                                                                             Immunoglobulin Fc region; binding; whole blood; plasma; transgenic milk; antibody response; half-life; stability; circulatory system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptides, useful as binding molecules for detecting, isolating purifying immunoglobulin Fc-region polypeptides present in a solution, for regulating or preventing an antibody response.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of evaluating sample by providing a soluble serum protein (I), one or more compounds physically associated with (I), and a (I)-binding agent that comprises a peptide that specifically binds to (I), allowing the (I)-binding agent to bind to to form a complex including one or more compounds physically associated with (I), separating the complex from one or more components of the sample, and evaluating one or more of the physically associated compounds. The sample comprises blood or serum, or is obtained from a biopsy. The sample may also be obtained from a tumour or a region within modulate interaction of serum protein-binding compound and serum protein and for identifying binding ligands for serum protein. The present sequence represents a serum albumin-binding peptide identified using the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Evaluating sample comprising soluble serum protein by forming complex comprising serum protein and physically associated compounds using peptide ligand that specifically binds with proteins, which is separated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

the foll antiennes esquences given in the appecification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

CC (1) a vector comprising a promoter operably linked to the nucleic acid concluded are:

CC (1) a vector comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that thas an activity against a hilloence the activity of the gene product or that has an activity against a biological pathway contained for proliferation, or that inhibits cellular proliferation; (8) identifying a compound that inhibits proliferation of an organism acts; (9) manufacturing an antibicit; (10) profiling a compound activity; (11) a culture comprising strains in which the gene or underexpressed, (12) determining the extent compound; a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or product is overexpressed or underexpressed; (12) determining the extent compound; or (13) identifying the target of a compound that inhibits the compound that inhibits the compound that inhibits or collection of an organism. The antisense nucleic acids are useful for dentifying proteins or screening for homologous nucleic acids required for dend discovery proprises.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the princed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid comprising any one of
Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Zyskind JW;

The present invention provides the protein and coding sequences for the variable regions of human monoclonal antibodies which are immunoreactive with human immunodeficiency virus-1 (HIV-1) envelope glycoprotein gpl20. These can be used in diagnosis and therapy of HIV-1 infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel human monoclonal antibody immunoreactive with human immunodeficiency virus-1 glycoprotein gpl20, useful for detecting HIV-1 in biological sample and providing passive immunotherapy to HIV-1 infected mammal.
                                                                                                                       Human immunodeficiency virus-1; HIV-1; human monoclonal antibody; envelope glycoprotein; gp120; diagnosis.
                                                                                  Human HIV-1 monoclonal antibody SEQ ID NO: 46.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid derived from
Enterococcus faceium encoding an Enterococcus faceium polypeptide having
One of 10 fully defined sequences given in the (or comprising 40
sequential nuclectides chosen from any of the nucleic acids, its
complement or sequences hybridising to it). Also included are a
recombinant vector comprising the nucleic acid operably linked to
transcription regulatory element, a cell comprising the vector and a
single-stranded probe comprising the nucleic acid. The nucleic acids are
chosen from 3654 disclosed sequences encoding 3654 disclosed proteins.
The nucleic acids is useful for diagnosing pathological conditions
resulting from E. faceium bacterial infection (e.g. urinary tract
infection, bacteraemia, endocarditis, wounds and abdominal-pelvic
infection, and for screening drugs such as agonists and antagonists. The
nucleic acid is useful for recombinant production of Candida albicans
derived peptides or antisense polypeptides. Pharmaceutical compositions
and vaccines containing the nucleic acid are useful for preventing or
treating Enerococcus faccium infections. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

Screening presence of Pseudoxanthoma elasticum mutation useful for identifying homozygotes, compound heterozygotes or carriers involves determining presence of mutation in MRP6 (ABCC6) nucleic acid. Urban Z, Example 5; Page 152-159; 163pp; English Lesaux O, 23-FEB-2001; 2001WO-US005741. 23-FEB-2000; 2000US-0184269P. Ouery Match Best Local Similarity 71.4%, 26-JAN-2000 (first entry) Csiszar K, 996 GYWLSLW 966 2001-536645/59 PXEI-) PXE INT INC UYHA-) UNIV HAWAII 2 GYWLTIW 8 Sequence 1498 AA; WPI; 2001-536645/ N-PSDB; AAD16236. 30-AUG-2001. Boyd CD, AAY43544; RESULT 10 AAY43544 ð 셤 The invention relates to methods and compositions for diagnosing and treating Pseudoxanthoma elasticum (PXE) and PXE associated physiological dysfunctions. The invention is useful for screening for the presence of a CPXE mutation. Mutations associated with PXE maps to the ATP-binding CC cassette transporter ABCC6 (MRP6-Multidrug Resistance associated protein-CC 6) gene locus on chromosome 16. ABCC6 (MRP6) gene encodes a 165 kDa protein located in the plasma membrane containing 17 membrane-spanning composition to three transmembrane domains. PXE is inherited as an autosomal recessive phenotype or appears as a sporadic phenotype. PXE is a heritable disorder characterised by mineralisation of elastic fibers in skin, arteries and the retina, that result in dermal lesions with associated laxity and loss of elasticity, arterial insufficiency, cardiovascular disease and retinal haemorrhages leading to macular C degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PXE associated MRP6 allels who are then provided with appropriate genetic counselling in view of the PXE status. The methods are useful for identifying homozygotes, compound heterozygotes or carriers and thus are consentling in view of the PXE status. The methods are useful for cuseful in the area of genetic testing, carrier detection and prenatal diagnosis. The present sequence is human ATP-binding cassette (ABC) transporter, ABCC6 (MRP6) truncated mutant which is obtained as the creall of a stop codon at position 1141 of MRP6 protein. Note: The human ATP-binding cassette transporter ABCC6 (MRP6) protein [SED ID NO: human ATP-binding cassette transporter ABCC6 (MRP6) protein [SED ID NO: human ATP-binding cassette transporter ABCC6 (MRP6) protein [SED ID NO: human ATP-binding variet transporter ABCC6 (MRP6) protein [SED ID NO: human ATP-binding variet transporter ABCC6 (MRP6) protein [SED ID NO: human ATP-binding variet vari ô Mouse; prenatal diagnosis; dermal lesion; cardiovascular disease; MRP6; whitifarug Resistance-associated protein 6; macular degeneration; ABCC6; ATP-binding cassette transporter; arterial insufficiency; chromosome 16; Pseudoxanthoma elasticum; PXE; heritable disorder; retinal haemorrhage. Screening presence of Pseudoxanthoma elasticum mutation useful for identifying homozygotes, compound heterozygotes or carriers involves determining presence of mutation in MRP6 (ABCC6) nucleic acid. ```
The invention relates to methods and compositions for diagnosing and treating Pseudoxanthoma elasticum (PXE) and PXE associated physiological dysfunctions. The invention is useful for screening for the presence of a CX MED with the AXP-binding composition. Mutations associated with PXE maps to the AYP-binding composition. Mutations associated with PXE maps to the AYP-binding composition on chromosome 16. ABCC6 (MRP6) gene encodes a 165 kDa protein located in the plasma membrane containing 17 membrane-spanning chalces grouped into three transmembrane domains. PXE is inherited as an autosomal recessive phenotype or appears as a sporadic phenotype. PXE is a heritable disorder characterised by mineralisation of elastic fibers in skin, arteries and the retinal hamile and less of elasticity, arterial insufficiency, cardiovascular disease and retinal haemorrhages leading to macular cardiovascular disease and retinal haemorrhages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with appropriate genetic counselling in view of the PXE status. The methods are useful for counselling in view of the PXE status. The methods are useful for the identifying homozygotes, compound heterozygotes or carriers and thus are diagnosis. The present sequence is mouse ATP-binding casestte (ABC) transporter, ABCC6 (MRP6) protein belonging to sub-family "C".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                       The present sequence represents a human MPR-related ABC transporter (MOAT) protein, designated MOAT-E. The protein comprises a multi-domain structure including a tandem repeat of nucleotide binding folds appended C-terminal to a hydrophobic domain, having Walker A and B ATP binding sites and several potential membrane spanning domains. The MOAT nucleic acids are useful for screening a test compound for inhibition of MOAT mediated transport, indicated by restoration of articancer drug sensitivity, which in turn causes a reduction of transporter mediated collular efflux of anticancer agents. MOAT DNA or RNA may be used as probes to detect the presence or expression of genes encoding MOAT proteins. Anti-MOAT antibodies are useful for detecting and quantitating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; prenatal diagnosis; dermal lesion; cardiovascular disease; MRP6; Multidrug Resistance-associated protein 6; macular degeneration; ABCC6; ATP-binding cassette transporter; arterial insufficiency; chromosome 16; Pseudoxanthoma elasticum; PXE; heritable disorder; retinal haemorrhage.

The invention relates to methods and compositions for diagnosing and treating Pseudoxanthoma elasticum (PXE) and PXE associated physiological dysfunctions. The invention is useful for screening for the presence of a PXE mutation. Mutations associated with PXE maps to the ATP-binding cassette transporter ABCC6 (MRP6 maps to the ATP-binding cassette transporter ABCC6 (MRP6 maps as a persence of a protein located in the plasma membrane containing 17 membrane - spanning chelices grouped into three transmembrane domains. PXE is inherited as an autosomal recessive phenotype or appears as a sporadic phenotype. PXE is a heritable disorder characterised by mineralisation of elastic fibers in skin, arteries and the retinal haemorrhages leading to macular cardiovascular disease and retinal haemorrhages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PXE associated MRP6 alleles who are then provided with appropriate genetic counselling in view of the PXE status. The methods are useful for identifying homozygotes, compound heterozygotes or carriers and thus are constituted managements. ABCC6 (MRP6) protein belonging to sub-family "C". Since Pacific Fames associated managements and managements associated managements as a special managements. ABCC6 (MRP6) protein for managements it is also called Multidrug propriet and managements associated managements as managements as associated managements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Screening presence of Pseudoxanthoma elasticum mutation useful for identifying homozygotes, compound heterozygotes or carriers involves determining presence of mutation in MRP6 (ABCC6) nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The invention relates to methods and compositions for diagnosing and treating Pseudoxanthoma elasticum (PXE) and PXE associated physiological dysfunctions. The invention is useful for screening for the presence of a PXE mutation. Mutations associated with PXE maps to the ATP-binding Cassette transporter ABCC6 (MRP6 page encodes a 165 kba protein located in the plasma membrane containing 17 membrane spanning helices grouped into three transmembrane domains. PXE is inherited as an eutosomal recessive phenotype or appears as a sporadic phenotype. PXE is a heritable disorder characterised by mineralisation of elastic fibers in skin, arteries and the retina, that result in dermal lesions with a heritable disorder characterised by mineralisation of elastic fibers in skin, arteried and retinal haemorrhages leading to macular degeneration. The method is useful for screening a population of candiovascular disease and retinal haemorrhages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PXE associated MRP6 alleles who are then provided with appropriate genetic counselling in view of the PXE status. The methods are useful for useful in the area of genetic testing, carrier detection and prenatal diagnosis. The present sequence is human ATP-binding cassette (ABC) transporter, ABCC6 (MRP6) R1314W mutant protein. Note: The present sequence is human apportent is derived from human ATP-binding cassette transporter ABCC6 (MRP6) protein (ABE09361)
                                                                                                                                                                                     Human, prenatal diagnosis, dermal lesion, cardiovascular disease, MRP6, Multidrug Resistance-associated protein 6, macular degeneration, ABCC6, ATP-binding cassette transporter, arterial insufficiency; chromosome 16; Pseudoxanthoma elasticum; PXE; heritable disorder; retinal haemorrhage,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              identifying homozygotes, compound heterozygotes or carriers involves determining presence of mutation in MRP6 (ABCC6) nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Screening presence of Pseudoxanthoma elasticum mutation useful for identifying homozygotes, compound hereronical
                                                                                               Human ATP-binding cassette transporter ABCC6 (MRP6) R1314W mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "Wild type Arg substituted with Trp"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Lesaux O, Urban Z, Terry S;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Location/Qualifiers
